

January 3, 2002

Dear Rod,

First I must apologize for letting so much time go by before getting this report to you. This has been a very busy several months for us. We've been making the trip to DeBary every 2 or 3 weeks to check on my parents and take care of things for them, helping a widowed neighbor with her yard work and repairs, etc., as well as trying to keep up with our own affairs. Not to mention the holidays, and getting our house ready to sell, and packing to move into our new home next month!

I've been feeling so good since I finished my interferon treatments last spring, and have so much energy now that my blood count is back to normal that I just don't stop long enough to sit down and write a letter. It's now 1:25 AM and I'm still going!

I am still taking the aloe, though in smaller amounts than I was during the hepatitis C treatments. I am enclosing my last 2 blood work reports which show that I am hepatitis-free, and that my ALT level is normal and has remained so for several months. My doctor says I'm cured, and has decided not to do another liver biopsy. I wish that he would because I'd like to see how much scarring has been healed by the aloe.

Hoping we get down to see you in the near future. Take care.....

Love,

Karen

## TESTIMONY

KAREN DEHAAN

APRIL 17, 2000

On Monday April 17, 2000, during a telephone conversation with Karen, she mentioned, she has been injecting the GENUINE ALOE VERA GEL, off and on for several years. She has been having stomach problems and not feeling well, for a long time.

The Doctor's diagnosed her with having Hepatitis C. It has damaged her liver - scarring it. The Doctor's said the scarring would not go away, but it is going away with the injecting the Genuine Aloe Vera gel. The cells under the scarring didn't die. They prescribed "Intron-A"-this consists of Infeon Alpha 2-B, plus Ribabarin, which I understood to be an anti-depressant.

Since she has been taking the Genuine Aloe Vera Gel, her high red count and high hemoglobin count is down.

ALT level - Her liver enzyme count, before she was taking the Gel had sky rocketed. After taking the Genuine Aloe Vera Gel, the past month the count was 63, this month, the enzyme count was down to 19. Both the Doctor and the Nurse, told her to keep drinking the Aloe Vera Gel.

She also, has been taking vitamins with the GENUINE. ALOE VERA GEL.
